

How To Use PowerPoint

A Brief Introduction to Commonly Used Features

By Ryan McKenzie

Introduction

PowerPoint is a very commonly used, fairly powerful presentation software from Microsoft. In your academic career (undergrad, graduate, or professional) there is a good chance that you have been or will be exposed to this tool. Furthermore, most of you will need to use it. This slide show is intended not only to be presented as a user guide to PowerPoint, but to be distributed as a way to practice what you learn as you learn it.

What Will be Demonstrated

- Adding Slides to a Presentation
- Using a Uniform Appearance/Motif
- How to Vary Slide Layout and Text (font, size, color)
- Using Graphics from ClipArt or a File
- Using Animated Text (Timed and Manual)
- Applying Slide Transitions
- Adding Sound (From a File or the Gallery)
- Using AutoShapes
- Adding Videos and Animation
- Placing Action Buttons for Nonlinear Slide Selection
- Linking to Web Content or Email Addresses

Adding/Formatting Slides

- Right-Click the Timeline to the left  and go to “New Slide”
- OR go to “Insert” and select “New Slide”
- Open the “Layout” tab to the right  to change the format of a slide

Appearance/Motif

- You can Apply a Motif by Opening the “Design” tab on the right □
 - Then Click on the Desired Motif to apply it to all slides
 - Click on the small drop down if you wish to apply the motif to only the current slide

Variation in Layout and Text

- To Select a New Slide Layout, Open the “Layout” Tab to the right
- You can Use the Font **Color** drop down menu to change the text color
- Use the Drop Down **Font** and **Size** menus above to vary the text

Clip Art Graphics

- To Insert ClipArt, go to “Insert” and put your mouse on “Picture”
- Another Menu will Open, select ClipArt
- Once you Select your Image, You must Position and Resize it with the Mouse

File Graphics

- To Insert a File Image, go to “Insert” and put your mouse on “Picture”
- Another Menu will Open, select “From File”
- Once you Select your Image, You must Position and Resize it with the Mouse

Animated Text (Manual)

- 1) Set Up your Slide the Way You Want
- 2) Go to “Slide Show”
 - and select “Custom Animation”
- 3) Highlight The Section You Wish To Animate
- 4) Click “Add Effect” At the Upper Right □
- 5) Select and Preview Your Effect
- 6) Highlight Your Effect and Make Sure the “Start” drop down is set to “On Click”
- 7) To Preview Your Slide Click “Play” at the Lower Right□

Animated Text (Timed)

- Use the Same Basic Steps as Before
- Select the Desired Animation from the Right□
- Press the Drop Down and Select “Timing”
- Make Sure the “Start Box” is set to “After Previous”
- Set a Delay Time and You’re Done

Slide Transitions

- While Working with the Slide you Wish to Transition into, go to “Slide Show” and select “Slide Transitions”
- A List of Available Transitions will Appear on the Right □
- Once you Select your Transition, you can Change the Speed or Even Add Sound!

Using “Canned” Sounds

- To Add a Sound Clip to Your Slide, go to “Insert” and Extend the Menu if Necessary
- Place your Mouse over “Movies and Sounds”
- Select “Sound From Clip Organizer” to use the “canned sounds” provided by Office
- Select Your Sound to the Right and then Choose Whether to Play it Automatically or on Click

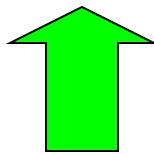

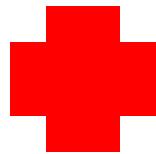

Using Sound Files

- To Use a Sound File of Your Own, Follow the Same Process Except this time Select “Sound From File”
- Choose the File from the File Browser
- Notice a Small Speaker Icon is Inserted with any Sound, This WILL BE VISIBLE during the Slide Show so Position it Accordingly

Jump Back To “Action Buttons”... 

AutoShapes

- AutoShapes are Convenient for Making Quick Illustrations or Diagrams such as Flow Charts
- Go to “Insert” and place your Mouse Over “Picture”
- Select “AutoShapes” and a Small Floating Menu Will Appear in the Editing Area
- Click on a Category of AutoShapes to see what Shapes are Available
- Click the Desired Shape from the Drop-Down and Draw it on Your Screen
- After Drawing an AutoShape, you can Position and Resize it as you Please
- Double-Click on an AutoShape to Change its Color and Other Options

Advanced AutoShapes

- By selecting several AutoShapes and right-clicking, you can group them together.
- Any of the Custom Animations we Used for Text Sections can be Applied to Groups or Single AutoShapes

Embedding Video

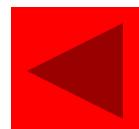

- To Play a Video in Your Slide Show, go to “Insert” and Place your Mouse Over “Movies and Sounds” then Select “Movie From File”
- Any Movie that is Supported Will Automatically be Shown When you Browse for the File
- Once the Video is Inserted, Select if You Want it to Play Automatically
- Then, you can Position and Size the Video how You Wish

Action Buttons

- You can Add Action Buttons to Move Around non-linearly in Your Presentation
- Go to “Slide Show” and Select “Action Buttons”
- Select Your Desired Button Type then Draw Your Button and a Window Will Appear
- Set Up your Properties, then you can Double Click the Button to Change Color
- You Can Also Resize and Position the Button After it is Created

Go See HAL Again...

Linking to Web Content

- You Can Link to Web Content and Open it During Your Slide Show
- The Computer You Used During the Slide Show MUST Have Internet Access
- Highlight a Section of Text and Right-Click it
- Select “Hyperlink” (Any Spelling or Grammar Errors must be corrected or ignored to select “hyperlink”)
- Fill In the Address for Your Target Content
- Click HERE to Visit www.campcaleb.com

Adding Email Links

- A Good Idea is to Add Your Email Address or other Contact Information to Your Slide Show
- You Add an Email Address the Same Way you Link to Web Content, EXCEPT in the Address Field You Need to Type:
 - “mailto:youremail@yourdomain.com”
- For More Help or Information Contact Me:
 - Ryan N. McKenzie
 - (859) 257-8745
 - rnmcke0@uky.edu

Originally based upon relational algebra and tuple relational calculus, SQL consists of a data

manipulation language, and a data control language. The scope of SQL includes data insert, query, update and delete, schema creation and modification, and data access control. Although SQL is often described as, and to a great extent is, a declarative language (4GL), it also includes procedural elements.

SQL was one of the first commercial languages for Edgar F. Codd's relational model, as described in his influential 1970 paper, "A Relational Model of Data for Large Shared Data Banks."^[10] Despite not entirely adhering to the relational model as described by Codd, it became the most widely used database language.^{[11][12]}

- SQL became a standard of the American National Standards Institute (ANSI) in 1986, and of the International Organization for Standardization (ISO) in 1987.^[13]

Originally based upon relational algebra and tuple relational calculus, SQL consists of a data

manipulation language, and a data control language. The scope of SQL includes data insert, query, update and delete, schema creation and modification, and data access control. Although SQL is often described as, and to a great extent is, a declarative language (4GL), it also includes procedural elements.

SQL was one of the first commercial languages for Edgar F. Codd's relational model, as described in his influential 1970 paper, "A Relational Model of Data for Large Shared Data Banks."^[10] Despite not entirely adhering to the relational model as described by Codd, it became the most widely used database language.^{[11][12]}

- SQL became a standard of the American National Standards Institute (ANSI) in 1986, and of the International Organization for Standardization (ISO) in 1987.^[13]

How To Use PowerPoint

A Brief Introduction to Commonly Used Features

By Ryan McKenzie

Introduction

PowerPoint is a very commonly used, fairly powerful presentation software from Microsoft. In your academic career (undergrad, graduate, or professional) there is a good chance that you have been or will be exposed to this tool. Furthermore, most of you will need to use it. This slide show is intended not only to be presented as a user guide to PowerPoint, but to be distributed as a way to practice what you learn as you learn it.

What Will be Demonstrated

- Adding Slides to a Presentation
- Using a Uniform Appearance/Motif
- How to Vary Slide Layout and Text (font, size, color)
- Using Graphics from ClipArt or a File
- Using Animated Text (Timed and Manual)
- Applying Slide Transitions
- Adding Sound (From a File or the Gallery)
- Using AutoShapes
- Adding Videos and Animation
- Placing Action Buttons for Nonlinear Slide Selection
- Linking to Web Content or Email Addresses

Adding/Formatting Slides

- Right-Click the Timeline to the left  and go to “New Slide”
- OR go to “Insert” and select “New Slide”
- Open the “Layout” tab to the right  to change the format of a slide

Appearance/Motif

- You can Apply a Motif by Opening the “Design” tab on the right □
 - Then Click on the Desired Motif to apply it to all slides
 - Click on the small drop down if you wish to apply the motif to only the current slide

Variation in Layout and Text

- To Select a New Slide Layout, Open the “Layout” Tab to the right
- You can Use the Font **Color** drop down menu to change the text color
- Use the Drop Down **Font** and **Size** menus above to vary the text

Clip Art Graphics

- To Insert ClipArt, go to “Insert” and put your mouse on “Picture”
- Another Menu will Open, select ClipArt
- Once you Select your Image, You must Position and Resize it with the Mouse

File Graphics

- To Insert a File Image, go to “Insert” and put your mouse on “Picture”
- Another Menu will Open, select “From File”
- Once you Select your Image, You must Position and Resize it with the Mouse

Animated Text (Manual)

- 1) Set Up your Slide the Way You Want
- 2) Go to “Slide Show”
 - and select “Custom Animation”
- 3) Highlight The Section You Wish To Animate
- 4) Click “Add Effect” At the Upper Right □
- 5) Select and Preview Your Effect
- 6) Highlight Your Effect and Make Sure the “Start” drop down is set to “On Click”
- 7) To Preview Your Slide Click “Play” at the Lower Right□

Animated Text (Timed)

- Use the Same Basic Steps as Before
- Select the Desired Animation from the Right□
- Press the Drop Down and Select “Timing”
- Make Sure the “Start Box” is set to “After Previous”
- Set a Delay Time and You’re Done

Slide Transitions

- While Working with the Slide you Wish to Transition into, go to “Slide Show” and select “Slide Transitions”
- A List of Available Transitions will Appear on the Right □
- Once you Select your Transition, you can Change the Speed or Even Add Sound!

Femto Solution Comparison Summary

Airvana 	<ul style="list-style-type: none"> ▪ Marketing Gateway and CPE ▪ Product offering is based on UNG and CPE (acquired 3-way) ▪ High degree of market perception and technology leadership
Alu Alcatel-Lucent	<ul style="list-style-type: none"> ▪ Marketing own Gateway and CPE partners (Sagem being the most significant) ▪ Product offering is a mix of repurposed solutions: BSR (FAP), VPN router (SeGW), IP/ATM switch (Iu Controller) ▪ Moderate market traction with tier 1 operators, 2 ongoing trials. Strong influence at AT&T
E/// ERICSSON	<ul style="list-style-type: none"> ▪ Positioning only GSM femtocell ▪ No clear plans for a 3G solution until 2009 ▪ Little traction and late entry into Femto
HUA 	<ul style="list-style-type: none"> ▪ Positioning for UMTS ▪ Product offering is their own end-to-end solution ▪ Market traction in European (Vod, Telfonica, O2, Orange), and Asian (StarHub) operators (approx. 6 trials)
IPaccess	<ul style="list-style-type: none"> ▪ Positioning a complete solution Oyster 3GT including Femtocell Gateway and CPE plus additional partnerships for femtocell ▪ Strong investment from Cisco, developing specific solutions for large customers ▪ Selected by AT&T
MOTO	<ul style="list-style-type: none"> ▪ Launched two femtocell access points (standalone and integrated) ▪ Claims end to end solution but no much market traction or product information available . ▪ One completed trial in Europe announced
NEC	<ul style="list-style-type: none"> ▪ Strategic focus on time-to-market and complete SI solution ▪ Product solution is based on SI multi-vendor offering: NextPoint, Kineto, Ubiquisys (currently evaluating other SeGW) ▪ Good market traction in Asia (Japan) and Europe (approx. 8 trials)
Nortel	<ul style="list-style-type: none"> ▪ TBD ▪ TBD ▪ TBD
NSN	<ul style="list-style-type: none"> ▪ Strategy to push proprietary Iu/IP interface with CPE partners (Airvana, Ubiquisys) ▪ Driving economies of scale with a wide choice of femtocell Access points ▪ Relative market traction with tier 1 operators, 2 ongoing trials. Selected by AT&T
ZTE	<ul style="list-style-type: none"> ▪ Femtocell solution with partners for the CPE (Samsung) and the Gateway (Nextpoint) ▪ Limited customer traction, one trial announced so far

Mobile Operator	Announced Date	Trial Date	Any Details	Solution Providers
AT&T (US)			Ongoing trial 1900MHz (2007) Signed deal with ip.access in Apr-08 for potential 7 million femtocells	Cisco/ip.access and NSN/Airvana
CHT (Taiwan)	Q2 2008	Q2 2009	RFP July 2008	
Comcast	June 2008		Exploring	
HSL (UK)	Jan 2008	Q4-2008	2.75G Femto	
KTF (S. Korea)			Q2 2008	ALU (April 2008)
KPN			Remote Trial planned Q2 08	
Mobilkom (Austria)				ALU
O2 UK	Feb 2008	Early 2009	Start trials in April 2008 and if successful will be extended to 500 users across UK in the summer. Names Vivek Dev COO Telefonica O2. Name: John Carvelho (Head of Core Network Innovations).	NEC (Kineto, Ubiquisys) ZTE
O2 – Manx			Remote Trial planned Q2 08	
O2 – Czech Republic				
Orange			Currently concentrated on the Enterprise Femto. Short listed with 4 others following the Enterprise RFP, negotiation ongoing	RFP: Huawei, ZTE, ALU, and NSN or Motorola
Orascom			Multiple countries	Selected Ip.access
Partner			Remote Demo – connection to core network in Nuremberg	
SFR (France)			Planning trial Q1 2008	ALU Q1 2008 Ongoing with Motorola/Ubiquisys, NSN? RFQ: Ubiquisys, Ip.access, NSN, Huawei, ALU
SingTel			Trial requested, expected in 2H08	TE is completing now a 2G Femto 3G Femto trial in Q1 2008

Mobile Operator	Announced Date	Trial Date	Any Details	Solution Providers
SKT (S. Korea)	Nov 2007	Q2 2008	WCDMA trial only	Huawei
StarHub			6 month market assessment trial since May 2008 with 200 subscribers. Name: Anil Nihalani, Head of Mobile Services	Huawei and ZTE
SoftBank		Q4 2007	In March 2008 Junichi Miyakawa (CTO Softbank) said commercial trial in May and mass deployment in October.	NEC and Ubiquisys (e-auction) Evaluating: Ubiquisys or ALU
TeliaSonera Denmark	Feb 2008	2Q 2008		ALU
TeliaSonera Lithuania	Feb 2008	2Q 2008		Motorola (Kineto and Ubiquisys)
Telstra (New Zealand)			Trial planned April 08	Lab trial ongoing with Huawei & Ericsson (2G)
Telenet (Belgium)			Connection to remote system requested (scheduled Q2 08)	
TMO – Germany	Feb 21, 2008	Q2 2008		Phase 1 evaluation Huawei RFQ issued in Q2-08.
TMO – Netherlands	Feb 21, 2008	Q2 2008		Phase 1 evaluation ip.access
TMO – UK	Feb 21, 2008	Q2 2008	Name: Emin Gurdenci (Technology Director at T-Mobile UK)	Phase 1 evaluation ip.access
TMO – USA	Jun 2008	July 2 2008	T-Mobile @Home with HiPort router.
